

BeFinder Chemical Price List

Included in the terms of purchase of this product is a limited license from Berylliant Inc for its use to detect beryllium using the technology owned by Berylliant. Further, the technology rights from Berylliant Inc under this license are only conveyed when equipment and materials are purchased from Berylliant Inc. or its appointed agent. The technology from Berylliant is covered under several patents and pending patents.

Qty.	Product	Unit Price	Unit price when ordered in quantities of 5 units or more	Unit price when ordered in quantities of 10 units or more
1	BeFinder CH-A: Chemical Kit - 96 Tests: 500ml of dissolution solution (CH-1) and 220ml of detection solution (HS-3). This is enough detection solution and dissolution solution for 96 runs plus 24 standardizations.	\$3,338	\$3,129	\$2,979
1	BeFinder CH-1: 500ml of dissolution solution (CH-1). This is enough dissolution solution for 96 runs plus 24 standardizations.	\$167	\$117	\$117
1	BeFinder CH-1-L: 1000ml of dissolution solution (CH-1).	\$335	\$234	\$234
1	BeFinder HS-3: 220ml of detection solution (HS-3). This is enough detection solution for 96 runs plus 24 standardizations.	\$3,171	\$3,012	\$2,862
1	BeFinder HS-3-L: 1 Liter (1000ml) of detection solution	\$10,112	\$9,606	
1	BeFinder CH-1-B: 250ml of dissolution solution (CH-1-B). This is enough dissolution solution for 48 runs plus 12 standardizations.	\$111	\$111	\$111
1	BeFinder HS-3-B: 110ml of detection solution (CH-2-B) This is enough detection solution for 48 runs plus 12 standardizations.	\$2,057	\$2,057	\$2,057
1	BeFinder ST-A: Set of 5 certified standards for calibration, each in a quantity of 100ml. The concentrations of Beryllium in the standards are 0ppb, 10ppb, 40ppb, 200ppb and 800ppb. Standards used to prepare 1000 calibration curves of five points. Each calibration set can be used repeatedly over a period of three days when stored properly.	\$1,896	\$1,896	\$1,896
